

## Solution Architecture

|                      |                                   |
|----------------------|-----------------------------------|
| <b>Date</b>          | 28 June 2026                      |
| <b>Team ID</b>       | XXXXXX                            |
| <b>Project Name</b>  | Personalized Networking Assistant |
| <b>Maximum Marks</b> | 5 Marks                           |

### Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

## Component Description Table

| Component Name            | Description / Role in Architecture                                                                                                                                                       | Technologies Used                                                      |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| <i>Presentation Layer</i> | <i>Provides the user interface where users enter event details, interests, generate personalized conversation starters, view conversation history, and submit feedback.</i>              | <i>Streamlit, HTML, CSS, Python</i>                                    |
| <i>API Gateway</i>        | <i>Acts as the entry point for all client requests. It receives requests from the Streamlit application, routes them to the appropriate services, and returns responses to the user.</i> | <i>FastAPI, Uvicorn</i>                                                |
| <i>Microservices</i>      | <i>Implements the core application logic, including AI-based conversation generation, event analysis, fact verification, history management, and feedback processing.</i>                | <i>Python, DistilBERT, GPT-2, Transformers, PyTorch, Wikipedia API</i> |
| <i>Database</i>           | <i>Stores conversation history, user feedback, and application data for future reference and analysis.</i>                                                                               | <i>JSON Files (history.json, feedback.json), Local File Storage</i>    |
