

Technology Stack

Date	27 June 2026
Team ID	XXXXXX
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	Streamlit	Provides a simple, interactive, and responsive user interface with minimal code.
2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	Python, FastAPI	FastAPI enables high-performance APIs, while Python supports AI and NLP libraries.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	SQLite	Lightweight database used to store conversation history and user feedback.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	Local Deployment / Docker (Optional)]	Easy local development and can be deployed using Docker for portability.

5	Version Control & CI/CD <i>(e.g., GitHub, GitLab, Jenkins)</i>	<i>Git & GitHub</i>	<i>Enables version control, collaboration, and project management.</i>
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	<i>Wikipedia API, DistilBERT, GPT-2, Transformers, Pytest</i>	<i>Wikipedia API provides fact-checking, DistilBERT extracts themes, GPT-2 generates conversation starters, Transformers supports AI models, and Pytest is used for testing.</i>
