

No. of Functional Features Included in the Solution

Date	30-06-2026
Team ID	
Project Name	Personalised Networking Assistant
Maximum Marks	5 Marks

Functional Features Overview:

This document lists all the functional features included in the project solution. Each feature is described with its purpose, implementation status, and contribution to the overall solution.

S.No	Feature Name	Feature Description	Module / Component	Status (Done / In Progress / Pending)	Marks Contribution
1	Context-Aware Icebreaker Generator	Generates tailored conversation starters for networking events based on user input.	Frontend (Streamlit) & Backend (FastAPI)	Done	
2	Event Theme Extraction	Automatically extracts key themes and topics from entered event descriptions using NLP.	Backend (NLP Analyzer)	Done	
3	Dynamic Networking Topic Generation	Creates relevant discussion topics and prompts to keep professional conversations flowing.	Backend (Topic Engine)	Done	
4	Real-Time Fact-Checking	Validates talking points or trending topics on the fly using external informational lookups.	Backend (Wikipedia-API Service)	Done	
5	Interactive UI	Clean, web-based layout for users to input goals, select event types, and view icebreakers.	Frontend (Streamlit)	Done	

6	History & Session Logging	Saves previous networking prompts and generated icebreakers locally for easy review.	Backend / Storage (JSON Persistence)	Done	
7	User Feedback Collection	Allows users to upvote or rate the quality of generated icebreakers to refine future results.	Frontend & Backend Loggers	Done	
8	Automated Route Verification	Ensures the reliability of backend communication and prompt handling before generation.	Backend (Pytest Suite)	Done	

Feature Summary:

Metric	Count / Value
Total Features Planned	8
Total Features Implemented	7
Core / Must-Have Features	6
Additional / Nice-to-Have Features	2
Features Tested & Verified	6

Feature Category Breakdown:

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	2	Streamlit input dashboard, Icebreaker display cards, feedback buttons.
2	Backend / Logic	3	Event Analyzer (NLP theme extraction), AI Icebreaker generator, Topic Engine.
3	Database / Storage	1	Local JSON-based historical session logging and prompt persistence.
4	API / Integration	2	FastAPI endpoints configuration, external Wikipedia-API verification client.
5	Security / Authentication	0	(Pending future scale—currently optimized for local sandbox and public cloud demonstration)
